Platform/SRE-focused engineer with 3+ years operating production services on Kubernetes (GKE, EKS), backed by 2+ years of Go development experience. Experienced with container registries and image lifecycle management, Linux-based production infrastructure, and AWS cloud alongside GCP. Comfortable diagnosing and resolving production incidents and operating independently with minimal supervision, while keeping the team informed.

Experience

Software Engineer & Team Lead Jan 2023 – Jul 2026
Pienomial Technologies Pvt Ltd · Kolhapur, India · Full-time

- Operated production services on **Kubernetes** (GCP GKE and AWS EKS) for 3+ years — rolling updates, liveness/readiness probes, Horizontal Pod Autoscaling (HPA), and namespace-based resource quotas/limits for multi-tenant workload isolation.
- Designed and shipped backend services in **Go** — REST and gRPC APIs, and microservices communicating over gRPC and Redis pub/sub for async messaging.
- Managed the full **container image lifecycle** — built images with **Docker**, published to **GCP Artifact Registry**, and integrated publishing into CI/CD (Bitbucket Pipelines with GCP Cloud Build triggers): lint → test → build → publish → auto-deploy, cutting release cycles from a manual 2-day process to ~20 minutes; gated releases on **SonarQube** (SAST) and **Trivy** (image/CVE vulnerability scanning) findings.
- Administered **Linux**-based production infrastructure across GCP, AWS, and Azure VM deployments — systemd services, log inspection, and process/resource troubleshooting.
- Deployed and operated workloads on **AWS** (EKS, EFS, S3, ALB/ELB, IAM roles) alongside GCP as the primary cloud platform.
- Applied networking fundamentals — **TCP/IP, DNS, HTTP/HTTPS, and TLS/mTLS** — configuring **ALB/ELB** load balancing and service-to-service communication across microservices.
- Diagnosed and root-caused two production memory-leak incidents using **Prometheus, Grafana, and cAdvisor** metrics and SLO-aligned alerting, implementing corrective fixes.
- Independently owned services end-to-end with minimal supervision — solely built and operated Knolens Edge (design → Go backend → GCP deployment → App Store/Play Store release); grew and led a team from 2 to 4 engineers across 3 concurrent projects, keeping stakeholders informed via sprint planning and demos.

Selected Projects

- **Knolens Edge** — Go · Flutter · GCP Cloud Run · Kubernetes. Sole developer and operator end-to-end: infrastructure, CI/CD, deployment, and release management, with full ownership and minimal supervision.
- **Multi-Cloud Client Rollout** — AWS EKS · Docker · EFS · S3. Deployed and operated a production workload on a client's AWS EKS cluster with shared persistent and artifact storage.

Skills

Languages	Go (Golang), Python, JavaScript, Node.js, Java
Kubernetes	Kubernetes (GKE, EKS, HPA, Namespaces, Resource Quotas, Rolling Updates)
Container Registry	Docker, GCP Artifact Registry, Container Image Lifecycle, Image Publishing, CI/CD Integration
Cloud	GCP (Cloud Run, GKE, Compute Engine), AWS (EKS, EFS, S3, ALB/ELB, IAM), Azure (VM deployments)
Networking	TCP/IP, DNS, HTTP/HTTPS, TLS/mTLS, Load Balancing (ALB/ELB)
Security	SonarQube (SAST), Trivy (CVE / Image Vulnerability Scanning)
Linux & Tools	Linux, Git, Bash/Shell
CI/CD	Bitbucket Pipelines, GCP Cloud Build
Observability	Prometheus, Grafana, cAdvisor, Incident RCA

Education

B.Tech, Computer Science 2020 – 2023 · 86%
Tatyasaheb Kore Institute of Engineering & Technology

Diploma, Computer Engineering 2017 – 2020 · 86.06%
Government Polytechnic, Karad
